

Corrosion Technology Certificate

Duration 5 days

Description The Corrosion Technology Certificate is designed to train people working in a corrosion related field in the basics of corrosion and its control. The course covers the basic principles of corrosion, the forms it takes and the methods of control.

Who Should Attend? Those wanting a greater understanding of the principles of corrosion, its various forms and the means to control it.

Course Highlights

- Corrosion & Its Importance
- The Corrosion Process
- Predicting Corrosion Reactions
- Types of Corrosion
- Corrosion in Natural Environments
- Design Improvement
- Corrosion Properties of Metals
- Inhibitors & Water Treatment
- Protective Coatings
- Cathodic & Anodic Protection

Prerequisites Attendees must have completed Year 11 chemistry and maths. Experience in the corrosion industry is an advantage.

Please Note: The Corrosion Technology Certificate is required to apply for the ACA's Certification Scheme.
